

## Solenoid valves VUVG/valve terminals VTUG

FESTO

Festo Core Range

Solves the majority of your automation tasks

Worldwide:  
Simply good:  
Fast:

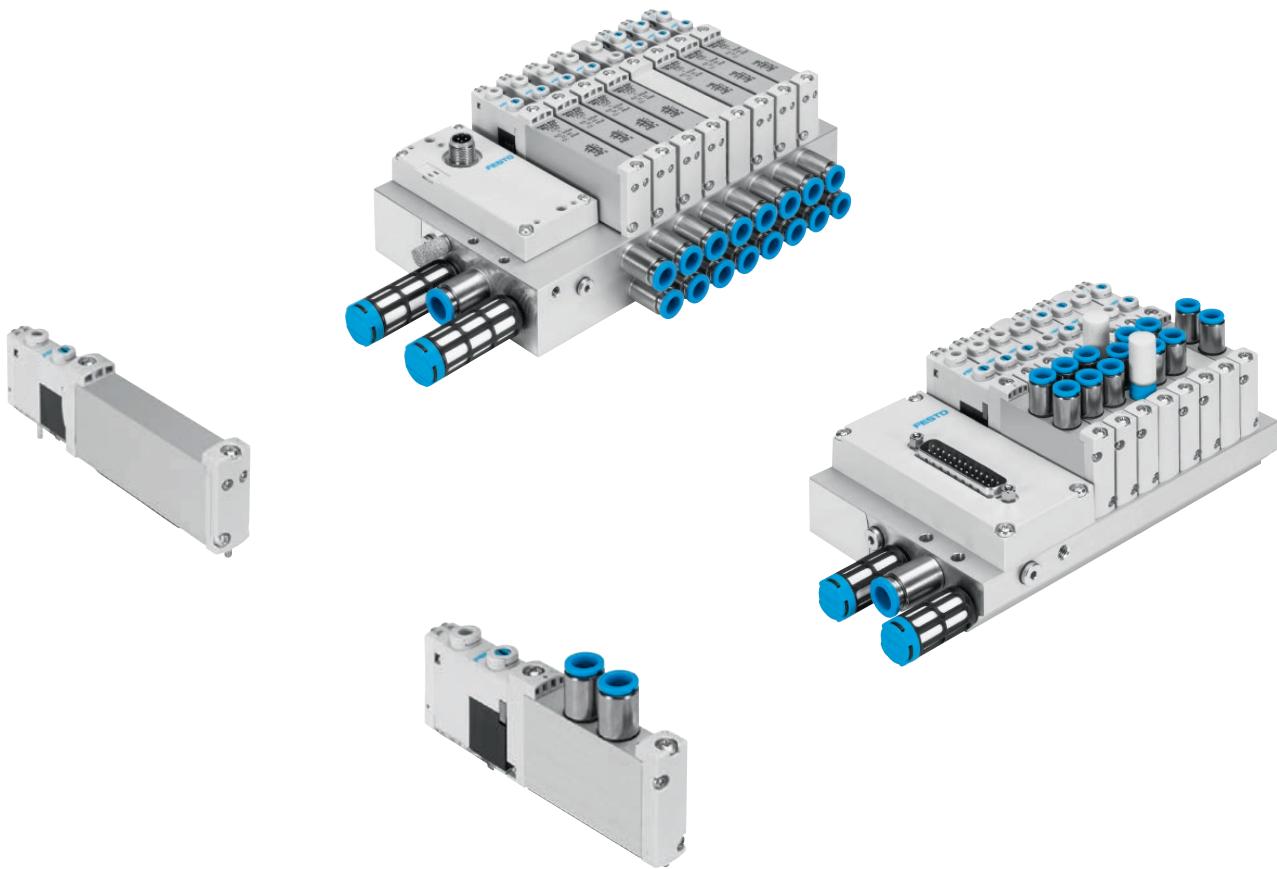

Quickest delivery – wherever, whenever  
Expected high Festo quality  
Easy and fast to select

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.

The Core Range offers you the best value for your automation tasks.

Just look  
for the  
star!

## Key features

### Innovative

- Festo-specific I-Port interface for bus nodes (CTEU)
- IO-Link mode for direct connection to a higher-level IO-Link master
- Festo-specific I-Port interface with interlock
- Different multi-pin plug connections using Sub-D or ribbon cable
- Reversible piston spool valves, up to 24 valve positions
- Reduced power consumption
- Excellent price/performance ratio

### Flexible

- Choice of quick push-in connectors
- Multiple pressure zones possible
- Sub-D variant and fieldbus interface with protection to IP67
- Internal or external pilot air with the same manifold rail possible by using blanking plugs
- Sub-base valves with working ports underneath for installation in control cabinets

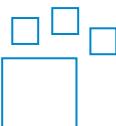

### Reliable

- Sturdy and durable metal components
  - Valves
  - Manifold rails
- Fast troubleshooting thanks to LED display
- Manual override: choose from non-detenting, detenting or covered

### Easy to install

- Easy mounting thanks to captive screws and seal
- Connection technology easy to change
- Inscription label holder for labelling

### Ordering data – Product options

Configurable product  
This product and all its product options can be ordered using the configurator.

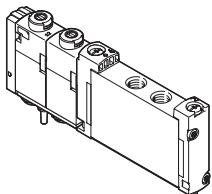

The configurator can be found under Products on the DVD or at  
→ [www.festo.com/catalogue/...](http://www.festo.com/catalogue/)

| Part no. | Type         |
|----------|--------------|
| 573606   | VTUG         |
| 8060699  | VTUG-VI-EX2E |
| 8143237  | VTUG-F1A     |

## Key features

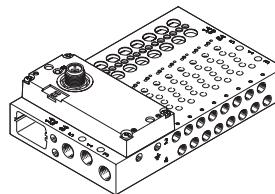

### Sub-base and semi in-line valves for valve terminal VTUG

VUVG-S...1T1, semi in-line valve

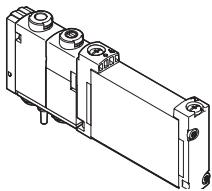

The supply ports (1, 3 and 5) for semi in-line valves are connected to the valve by common pneumatic links (e.g. sub-base). The working ports (2, 4) are on the valve.

Valve terminal VTUG with different electrical connections

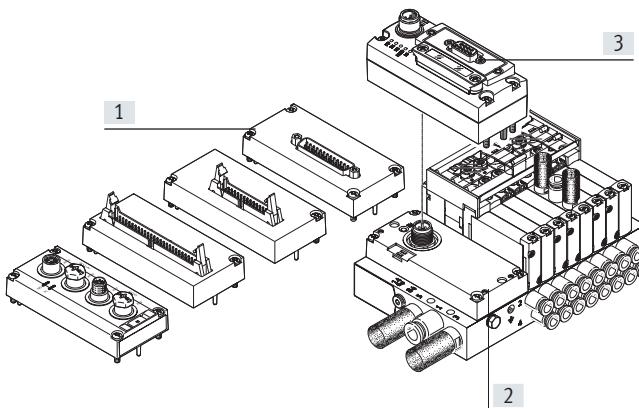

VUVG-B...1T1, sub-base valve

In the case of sub-base valves, the supply ports (1, 3 and 5) and the working ports (2, 4) are connected to the valve via pneumatic links (e.g. sub-base).

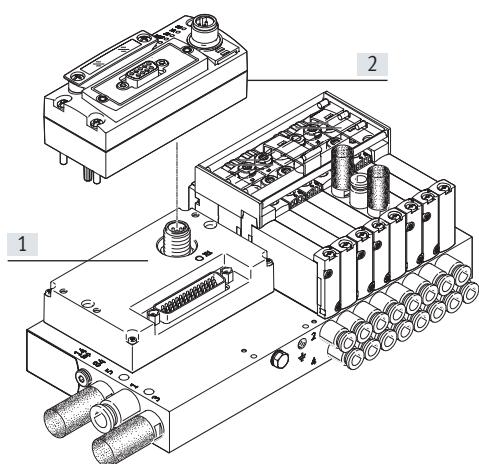

### Overview – Valve terminal with multi-pin plug connection and fieldbus interface

Different electrical connections:

- [1] Ribbon cable or Sub-D
- [2] I-Port interface
- [3] Bus node CTEU

### Overview – Valve terminal with interlock

Different electrical connections:

- [1] I-Port interface with interlock
- [2] Bus node CTEU

## Key features

### Equipment options

#### Valve functions

- 2x 3/2-way, 3/2-way, 5/2-way, 5/3-way valves
- Reversible piston spool valves, up to 24 valve positions

#### Electrical connection options

- IO-Link mode for direct connection to a higher-level IO-Link master
- Festo-specific I-Port interface for bus nodes (CTEU)
- Different multi-pin plug connections using Sub-D or ribbon cable
- Festo-specific I-Port interface with interlock (for valves of size 10 mm)

### Basic valves VUVG

#### Size

- 10
- 14
- 18
- Semi in-line valve
- Sub-base valve

### Valve functions

#### 3/2-way valve

- Single solenoid
- Normally open
- Normally closed

#### 2x 3/2-way valve

- Single solenoid
- Normally open
- Normally closed
- 1x normally closed, 1x normally open
- Mechanical spring
- Pneumatic spring

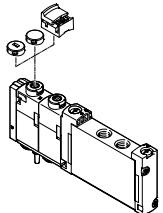

#### 5/2-way valve

- Single solenoid
- Pneumatic/mechanical spring
- Mechanical spring
- Pneumatic spring
- Double solenoid valve

#### 5/3-way valve

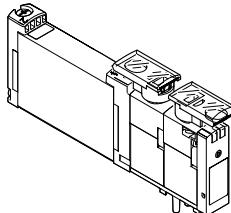

- Mid-position pressurised
- Mid-position exhausted
- Mid-position closed

### Cover caps for manual override

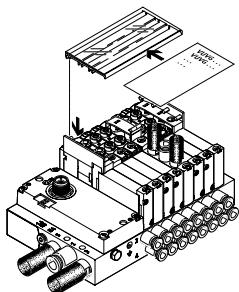

- Closed cover cap, concealed manual override
- Slotted cover cap, non-detenting manual override
- Cover cap for detenting actuation without tools

### Identification holder

Identification holder ASLR-D-L1 for identifying the valves and as a covering for the manual override.

### Inscription label holders

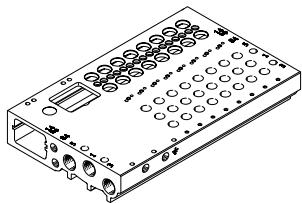

Inscription label holder ASCF-H-L1...  
for identifying the valves on the valve terminal VTUG

## Key features – Pneumatic components

### Manifold rail

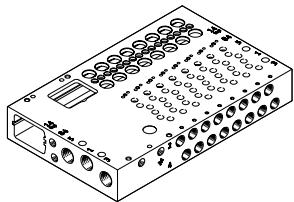

For semi in-line valves

The semi in-line valves are supplied with external pilot air. The pilot air is set via the manifold rail. The scope of delivery of the manifold rail includes a short and a long blanking plug for setting the pilot air.

- For semi in-line valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- For 2x 3/2-way, 5/2-way and 5/3-way valves
- 4 to 24 valve positions with electrical links

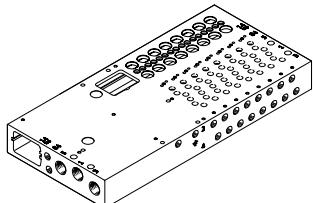

### For sub-base valves

The sub-base valves are supplied with external pilot air. The pilot air is set via the manifold rail. The scope of delivery of the manifold rail includes a short and a long blanking plug for setting the pilot air.

- For sub-base valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- For 2x 3/2-way, 3/2-way, 5/2-way and 5/3-way valves
- 4 to 24 valve positions with electrical links

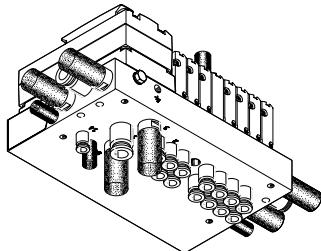

### Long version

#### Versions:

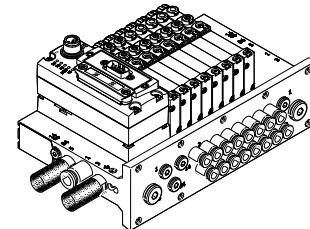

- I-Port interface with lateral outlet orientation: for semi in-line valves and sub-base valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- Interlock:  
For sub-base and semi in-line valves  
M5/M7  
(size 10)

### For control cabinet installation, outlet orientation underneath (U)

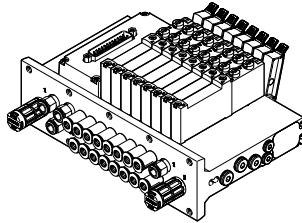

For sub-base valves M7 (size 10), G1/8 (size 14) and G1/4 (size 18).

### For control cabinet installation, outlet orientation at the front (FD)

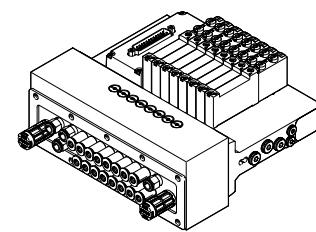

For sub-base valves  
M7 (size 10) and G1/8 (size 14).

### For control cabinet installation with shut-off function (hot swap)

Shut-off function for duct 1, for sub-base valves M7 (size 10) and G1/8 (size 14):

- Internal pilot air supply only
- Vacuum operation not possible

Shut-off function for duct 2 and 4, for sub-base valves M7 (size 10) and G1/8 (size 14):

- Internal/external pilot air supply
- Vacuum operation not possible

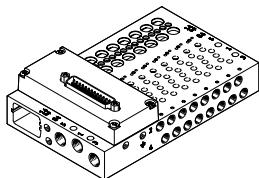

### Note

Pressurisation and exhaust at both ends is recommended for an optimised flow rate in cases where multiple valves switch simultaneously.

## Key features

### Electrical connection

#### Multi-pin plug connection

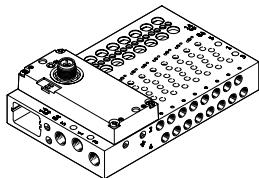

The signals are transmitted from the controller to the valve terminal via a pre-assembled or self-assembled multi-wire cable to the multi-pin plug connection.

This substantially reduces installation time compared to individually connected valves. The valve terminal can be equipped with max. 48 solenoid coils.

#### Versions:

- Sub-D connection
- Ribbon cable

#### I-Port interface

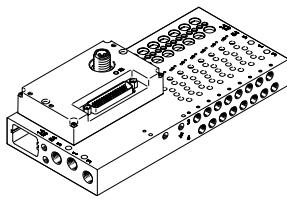

Festo-specific interface as a basis for bus nodes (CTEU) or in IO-Link mode for direct connection to a higher-order IO-Link master.

Communication and power supply take place via a common M12 interface.

#### Connection options:

- As I-Port interface for bus nodes (CTEU)
- In IO-Link mode for direct connection to an IO-Link master

#### I-Port interface with interlock

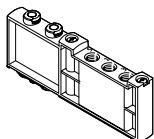

The interlock function enables the first 16 solenoid coils to be individually supplied externally.

The external supply guarantees the safety-related enabling of these valves.

### Note

The VTUG variant with multi-pin plug connection and fieldbus interface offers the additional option of individual electrical actuation of the valves (→ page 27).

### Supply plate

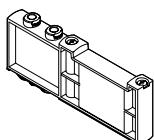

For additional air supply and exhaust via a valve position (ports for duct 1, 3 and 5).

### Note

The supply plate VABF-L1-14-P3A4-G18-T1 can only be used with G fittings. R fittings are not permissible.

#### Cover plate for vacant position

Vacant position cover

### Separator for pressure zones

For creating multiple pressure zones in a valve terminal

## Key features – Pneumatic components

### Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold rail and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUG.

A pressure zone is created by separating the internal supply ducts using a separator.

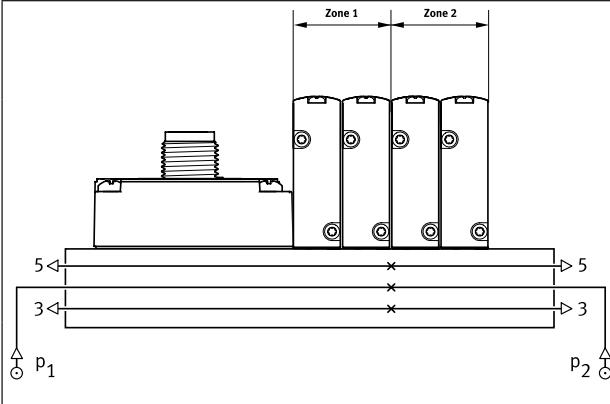

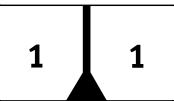

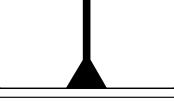

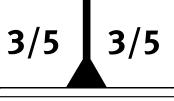

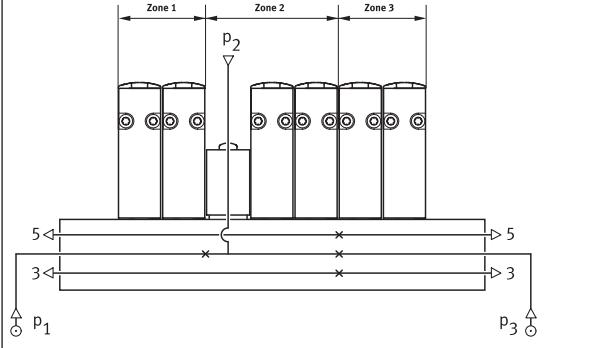

Pressure zone separation can be used for the following ducts:

- Duct 1
- Duct 3
- Duct 5

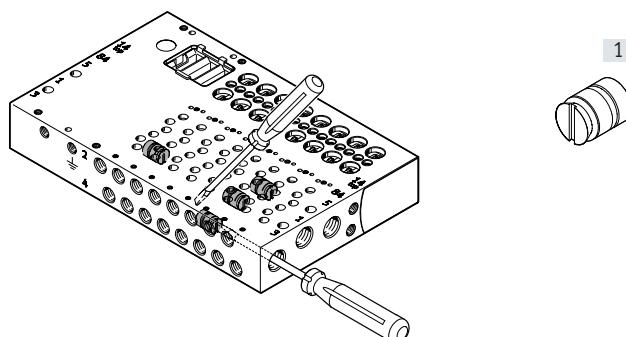

#### Note

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/air supply for each pressure zone
- Pressure zone separation is not possible in duct 12/14 (pilot air supply)

### Duct separation

|   | Description   |
|---|---|
|   | The pressure zones can be freely configured with the VTUG. The following duct separations are possible:<br><br>Duct 1 closed<br><br>Duct 1, 3, 5 closed<br><br>Duct 3, 5 closed<br> |
|  | The number of pressure zones with the VTUG is limited by the number of valve positions on the manifold rail. Note that each supply plate occupies one valve position.   |

### Separator VABD

[1] Separator VABD

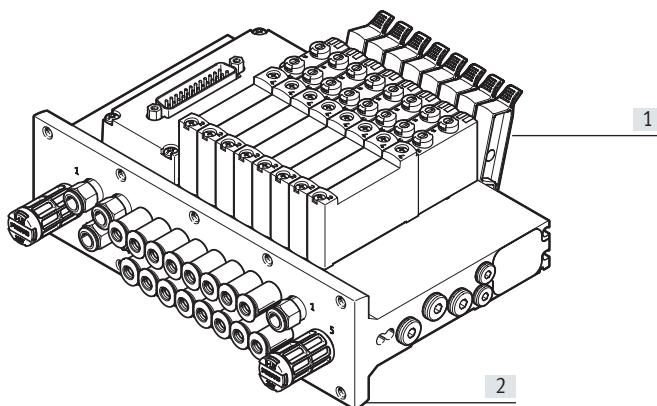

#### Note

With the VTUG, several pressure zones can be created by mounting separators (VABD). The separators are inserted in the manifold rail using a slotted screwdriver.

## Key features – Pneumatic components

### Shut-off function (hot swap)

For duct 1

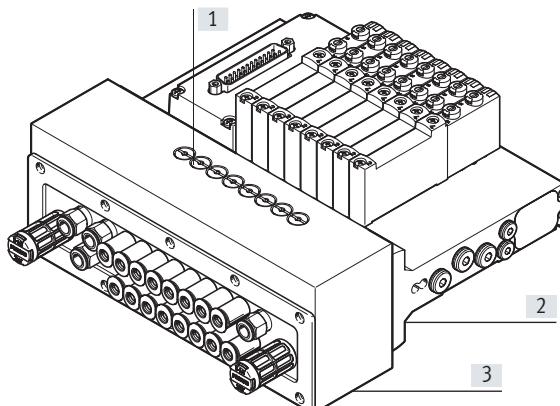

- [1] Actuating lever
- [2] Manifold rail with shut-off plate

The shut-off plate is located below the manifold block. Actuating the lever:

- disconnects the valve position from the compressed air supply (duct 1)
- exhausts the pilot air supply on the valve side (duct 12 and 14)
- Note the user instructions for use in combination with a supply plate

The actuating levers can be individually locked in place, securing them against unwanted actuation.

For duct 2 and 4

- [1] Plunger
- [2] Manifold rail
- [3] Manifold block

To actuate, press in the plunger with a pointed object or screwdriver and then turn clockwise through 90° until the stop is reached:

- Connection from the valve position to ports 2 and 4 is blocked
- No exhausting of components connected at ports 2 and 4

### Pilot air supply

#### Internal pilot air supply

Internal pilot air supply can be chosen with an operating pressure between 1.5 ... 8 bar, 2.5 ... 8 bar, or 3 ... 8 bar (depending on the valve used).

The pilot air supply is branched from duct 1 (compressed air supply) using an internal connection.

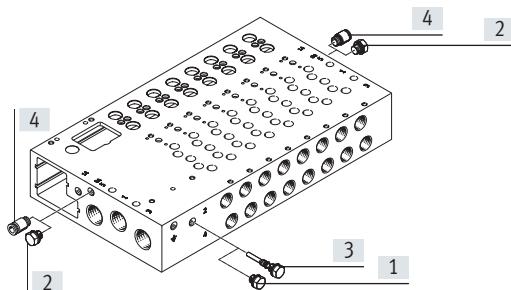

#### External pilot air supply

External pilot air supply is required for vacuum operation or operating pressures above 8 bar. The port for external pilot air supply (port 12/14) is located on the manifold rail.

#### Pilot exhaust air

The pilot air is exhausted via duct 82/84 of the manifold rail.

### Pilot air supply

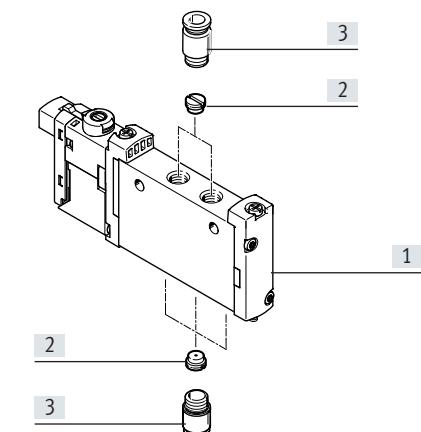

- [1] Blanking plug, short, with internal pilot air
- [2] Blanking plug for duct 12/14 with internal pilot air
- [3] Blanking plug, long, with external pilot air
- [4] Push-in fitting in duct 12/14 with external pilot air

The manifold rails have an internal connection between duct 12/14 and duct 1.

By inserting a blanking plug into this connection, it is possible to switch between internal and external pilot air.

## Key features – Pneumatic components

### Exhaust functions

#### Flow control valve for M5 thread

Semi in-line valve, individual electrical connection: flow control valve can be fitted in port 1, 3, 5 and/or in port 2, 4.

Sub-base valve, individual electrical connection: flow control valve can be fitted in port 2, 4.

#### Fixed flow restrictor, self-tapping

The fixed flow restrictor can be used to permanently set the exhaust flow rate in ducts 3 and 5.

The fixed flow restrictors are screwed into ducts 3 and 5 in the manifold rail.

Please see the relevant assembly instructions:

[www.festo.com/catalogue/...](http://www.festo.com/catalogue/)

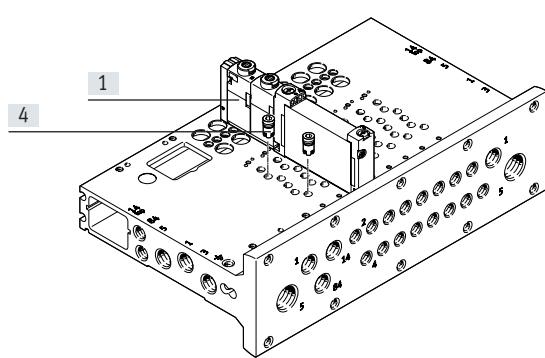

→ Support/Downloads

#### Check valve

Check valves block the flow towards the valves if back pressure develops in ducts 3 and 5 in the case of a high exhaust capacity, thereby preventing actuators from switching unexpectedly. The check valves are screwed into ducts 3 and 5 in the manifold rail.

#### Note

- It is not possible to use a check valve and a fixed flow restrictor (in the same duct) at the same time.
- When screwing in again, use the threads already present.

Please see the relevant assembly instructions:

[www.festo.com/catalogue/...](http://www.festo.com/catalogue/)

→ Support/Downloads

- [1] Valves VUVG
- [2] Flow control valve for M5 thread
- [3] Fitting
- [4] Fixed flow restrictor, self-tapping/check valve

## Key features – Pneumatic components

### Operation with different pressures

#### Vacuum operation

##### Points to note with 3/2-way valves with pneumatic spring return:

The 3/2-way valves are available in a design with two valves in one valve body and with pneumatic spring return. With these valves, the force for the return movement is obtained from port 1.

Vacuum operation is only possible at port 3 and 5, not at port 1.

With external pilot air supply, vacuum can be connected at port 1, 3, 5 of the 5/2-way and 5/3-way valves.

Vacuum operation is not possible when using the shut-off function (hot swap).

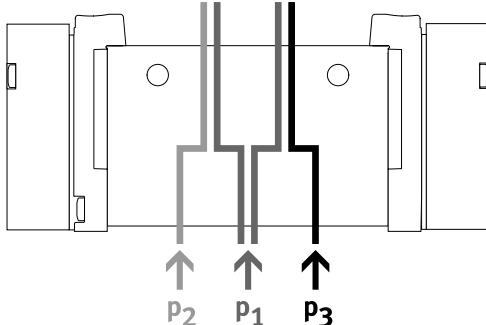

#### Reverse operation

The 3/2-way valves with pneumatic spring are not suitable for reverse operation, since at least the minimum pilot pressure must be present in duct 1.

#### Note

Pressure must be present at port 1.

#### Pressure divider (internal pilot air)

- Two different pressures are required
- Different pressures can be connected at duct 1, 3 and 5

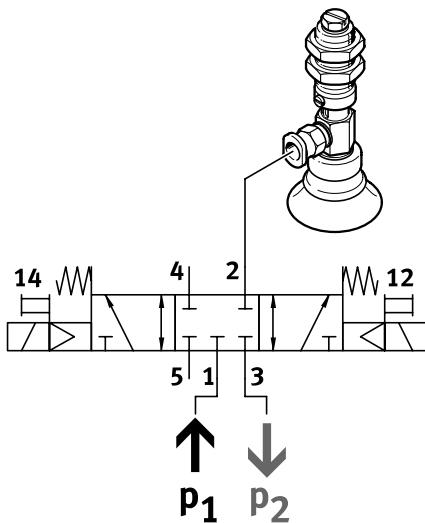

#### Advantages

Any pressure or vacuum can be connected at duct 3 and 5 both with external and internal pilot air

#### Note

- With internal pilot air, adhere to the minimum pilot pressure in duct 1
- With 2x 3/2-way valves without spring return, to the minimum pilot pressure in duct 1

#### Vacuum, ejector pulse and normal position

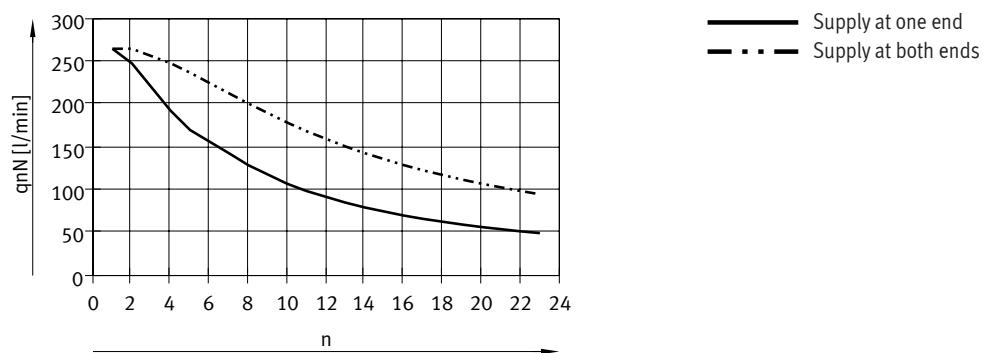

Vacuum, ejector pulse and normal position with internal pilot air can be achieved by connecting vacuum at duct 3 and pressure for the ejector pulse at duct 1.

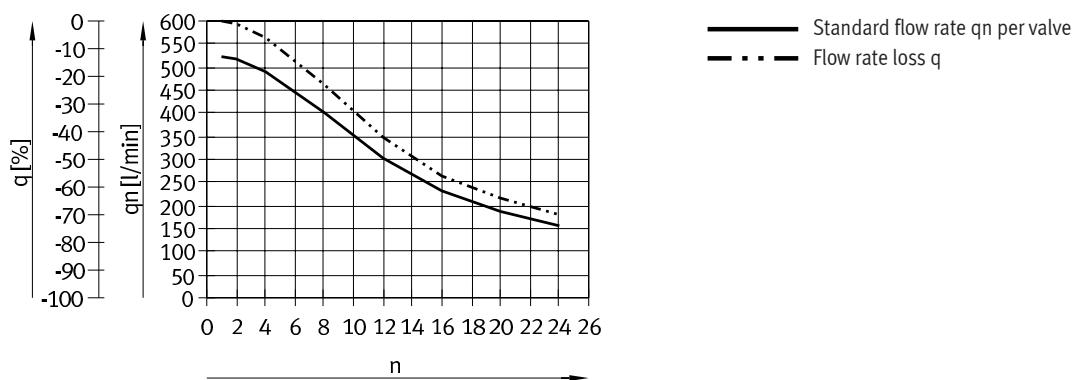

## Key features – Pneumatic components

### Standard nominal flow rate $q_{nN}$ as a function of the number of switched valves $n$

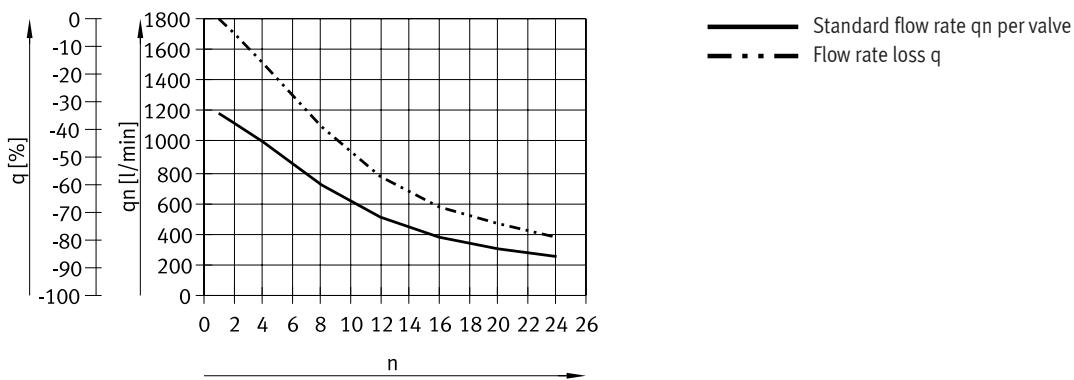

Size 10 mm, 5/2-way valves

Size 14 mm

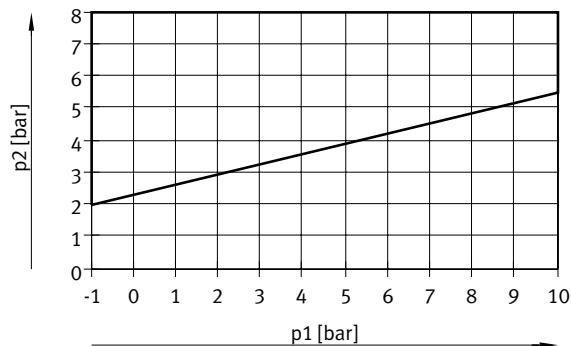

Size 18 mm

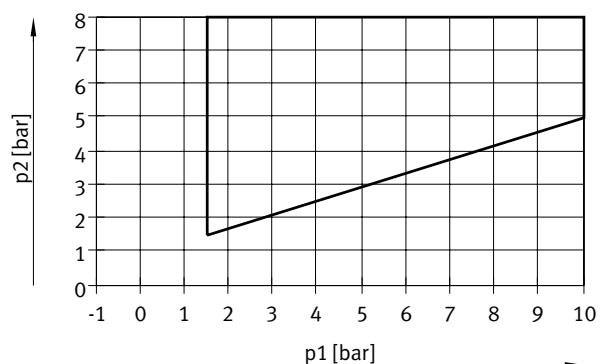

## Key features – Pneumatic components

### Pilot pressure p2 as a function of operating pressure p1

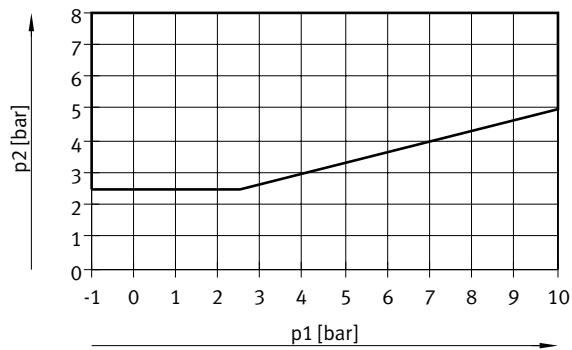

2x 3/2-way valve, mechanical spring return

2x 3/2-way valve, pneumatic spring return

3/2-way single solenoid valve and 5/2-way single solenoid valve

## Key features – Mounting

### Valve terminal mounting

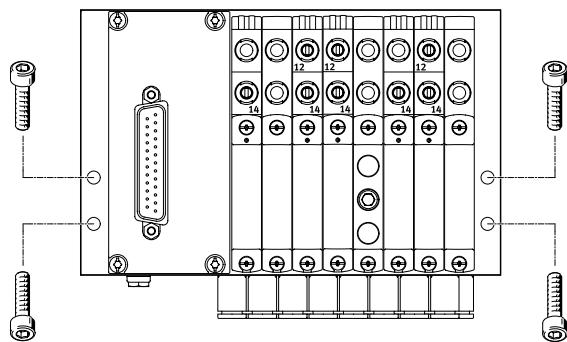

Sturdy terminal mounting via:

- Four through-holes for wall mounting
- H-rail mounting
- Mounting bracket

**Note**  
Use the M5 thread provided on the manifold block for earthing the valve terminal.

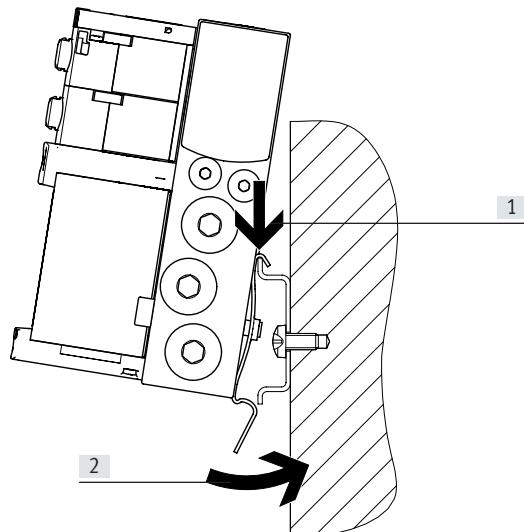

### Wall mounting

Screw the valve terminal VTUG onto the mounting surface using four M4 screws.

The mounting holes are on the left and right side of the manifold rail.

### H-rail mounting

Clip the valve terminal VTUG onto the H-rail (see arrow [1]).

Swivel the valve terminal onto the H-rail and secure in place with the clamping element (see arrow [2]).

Attach the manifold rails to a rail to EN 60715-TH35 using the H-rail mounting VAME-T-M4.

Use the following screws (to DIN 912) for mounting:

- Size 10: M4x30
- Size 14: M4x40
- Size 18: M5x50

**Note**  
Permissible use of the H-rail:

- Manifold rail with outlet on the side or on top.
- H-rail exclusively for horizontal mounting.
- Vibration/shock loads are not permissible for this type of mounting.

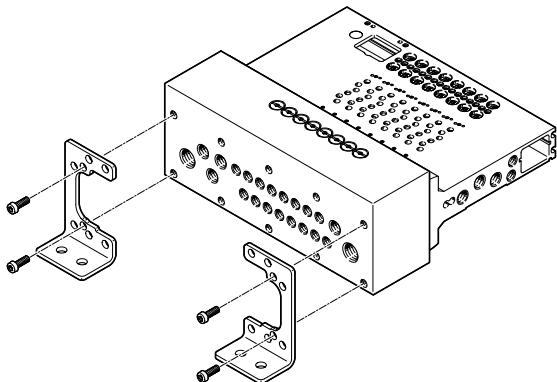

Size 14:

- Use H-rail type TH35-7.5 for valve terminals with a maximum of 8 valve positions.
- Use H-rail type TH35-15 for mounting in accordance with the standard and for more than 8 valve positions.

## Key features – Mounting

### Valve terminal mounting

#### Mounting with mounting bracket

The valve terminal VTUG is screwed onto the mounting bracket using four M4x16 screws.

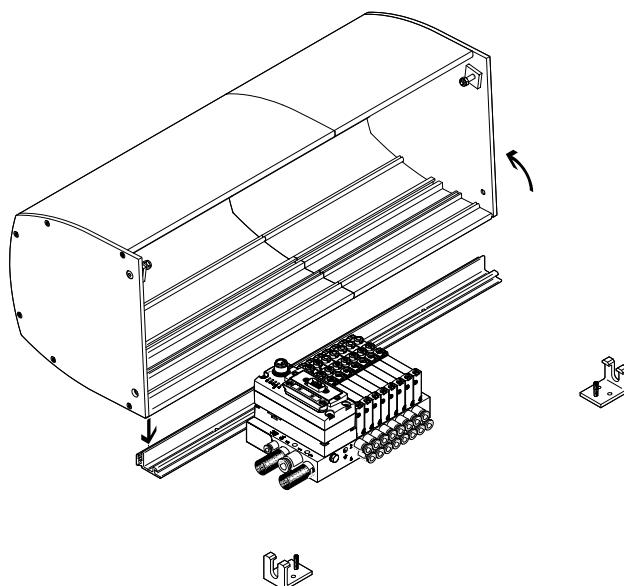

This enables the valve terminal to be mounted horizontally on the mounting surface.

The mounting brackets can be combined with the manifold rail for sub-base valves, for control cabinet installation with outlet orientation at the front.

## Key features – Mounting

### Hood for VTUG-VI-EX2

#### Description

The VTUG-VI-EX2 hood CAFC is a space- and cost-saving alternative to a control cabinet.

It is designed as an extruded aluminum profile and is installed on a mounting plate.

The valve terminal is well protected and is quick to install without the need for complex cabinet through-feed for connecting cables and tubing.

The rail and the two mounting brackets are mounted on a base plate. The hood is attached to the retaining rail and secured with two screws. There is also a stand-by position (detent of the hood in the open position).

The hood is locked using two side screws (which meet the requirements for a special fastener in compliance with ATEX).

The VTUG-VI-EX2 hood can be ordered online using the valve terminal configurator.

#### Advantages of the VTUG-VI-EX2 hood

- Impact protection (min. 7 J) for the modules underneath in combination with a suitable mounting plate provided by the user
- Protection against electrostatic discharge by using electrically conductive materials and the option of connecting an earth wire

- Protection against disconnection of live plugs (by securing the hood with at least one special fastener to EN 60079-0, 9.2 and 20)
- UV protection for the VTUG modules underneath

#### Points to note when using the VTUG-VI-EX2 hood

- VTUG-VI-EX2 power supply via angled plugs, no T plugs, no push-pull
- Electrical supply plate/additional supply only possible with angled plug

- Use of larger fittings (for tubing O.D. 12 mm and larger) only possible with the angled design
- Ducted exhaust air only with elbow connector
- The permissible ambient temperature range of the valve terminal is reduced by 5°C.

#### Note

The VTUG-VI-EX2 hood has no influence on the ATEX classification of the valve terminal or of the VTUG-VI-EX2 terminal.

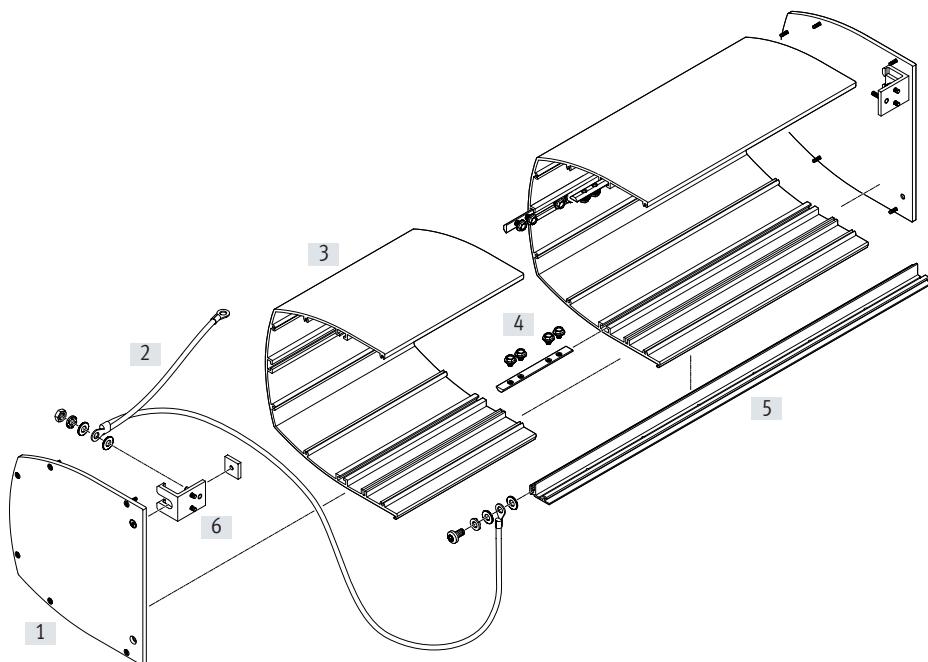

The VTUG-VI-EX2 hood has no influence on the IP degree of protection of the valve terminal or of the VTUG-VI-EX2 terminal.

The VTUG-VI-EX2 hood does not protect against the effects of the weather in installations that are not in enclosed spaces.

## Key features – Mounting

### Hood for VTUG-VI-EX2

#### Mounting

#### Procedure:

- Assemble the rail and mounting bracket included in the mounting kit
  - Attach the earthing cable
  - Assemble the hood (if applicable, screw together several hood sections and attach the side covers)
  - Attach and secure the hood
- [1] Side cover  
[2] Earthing cable  
[3] Hood section  
[4] Slot nut with screws, for joining the hood sections  
[5] Rail  
[6] Mounting bracket

#### Technical data

##### Weight:

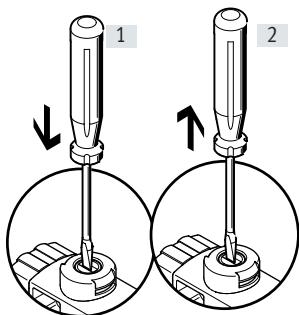

- Hood: approx. 500 g per 100 mm of length
- Mounting rail: approx. 550 g per 1000 mm of length
- Side pieces: approx. 500 g per side

- Ambient temperature  $-5 \dots +50^\circ\text{C}$
- RoHS-compliant

## Key features – Mounting

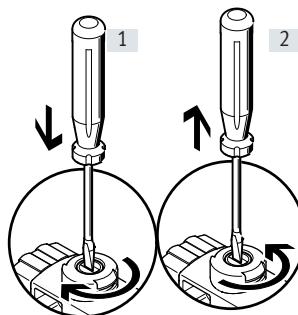

### Manual override (MO)

Manual override with automatic return (non-detenting)

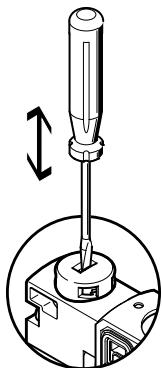

- [1] Press in the plunger of the MO with a pointed object or screwdriver.  
The pilot valve switches and actuates the main valve.
- [2] Remove the pointed object or screwdriver.  
The spring force pushes the plunger of the manual override back.  
The pilot valve returns to its normal position as does the main single solenoid valve (not the case with double solenoid valve code J).

MO with locking (detenting)

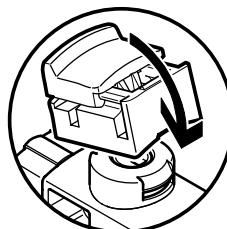

- [1] Press in the plunger of the MO with a pointed object or screwdriver until the valve switches and then turn the plunger clockwise by 90° until the stop is reached.  
The valve remains actuated
- [2] Turn the plunger anti-clockwise by 90° until the stop is reached and then remove the pointed object or screwdriver. The spring force pushes the plunger of the manual override back.  
The valve returns to its normal position (not the case with double solenoid valve code J).

MO non-detenting – with coded cover cap

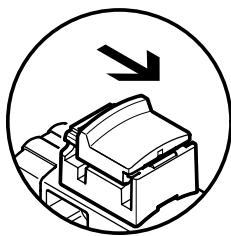

MO is actuated by pushing it with a pointed object or screwdriver and reset by spring force (detenting position prevented by coded cover cap).

MO detenting without tools – mounting

Turn MO to clip it onto the pilot valve.  
The MO cap can then be operated (detenting) without tools.

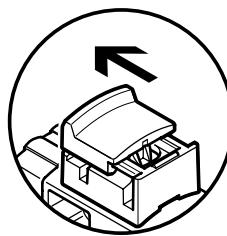

MO detenting without tools – actuation

Sliding the cap for the MO in the direction of the arrow causes the following to happen:

- Cap locks into the end position
- The pilot valve switches and actuates the main valve.

MO detenting without tools – actuation

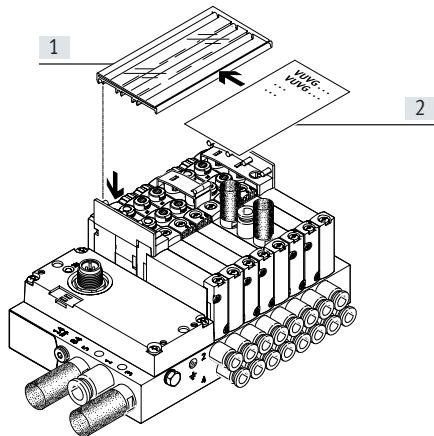

Sliding the cap for the MO in the direction of the arrow causes the following to happen:

- Cap locks into the end position
- The spring force pushes the plunger of the manual override back.
- The pilot valve returns to its normal position as does the main single solenoid valve (not the case with double solenoid valve code J).

## Key features – Mounting

### Inscription system

#### Inscription label holders

- [1] Inscription label holder AS-CF-H-L1 (code TT)

- [2] Inscription field

Mount the inscription label holder to label the valves. Open the inscription label holder to insert the inscription label and actuate the manual override. The inscription label holders are available in different sizes depending on the number of valve positions.

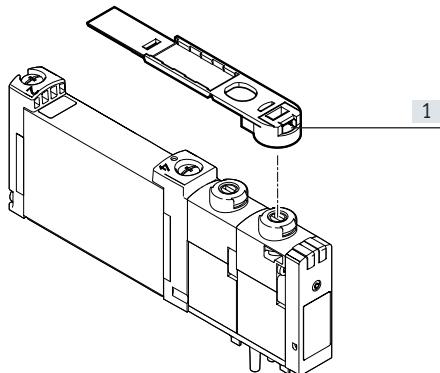

#### Note

Do not engage the manual override before mounting the inscription label holder.

The retainer for the inscription label holder covers the manual override of the valve beneath it when mounted.

The manual override can then only be operated as non-detenting.

### Identification holder

- [1] Identification holder ASLR-D-L1 (code TV)

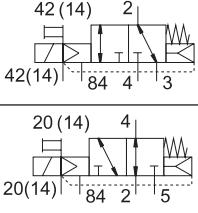

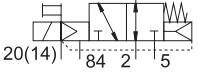

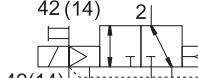

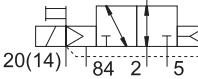

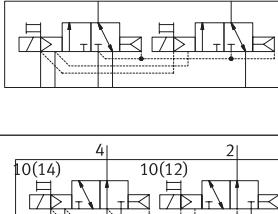

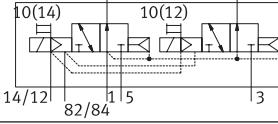

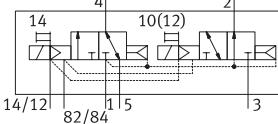

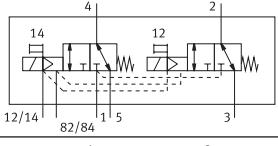

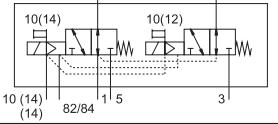

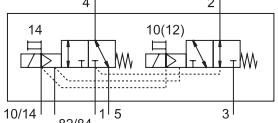

Use identification holders ASLR-D-L1 (code TV) to label individual valves. The identification holder is placed directly on the manual override.

#### Note

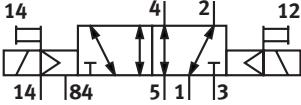

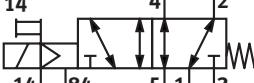

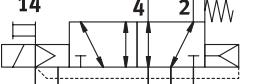

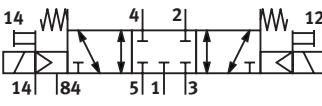

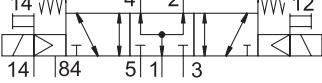

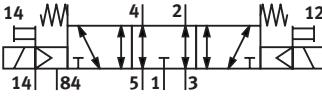

Do not engage the manual override before mounting the identification holder.

After the retaining brackets are fitted, the manual override can only be operated as non-detenting.

## Overview of valve functions

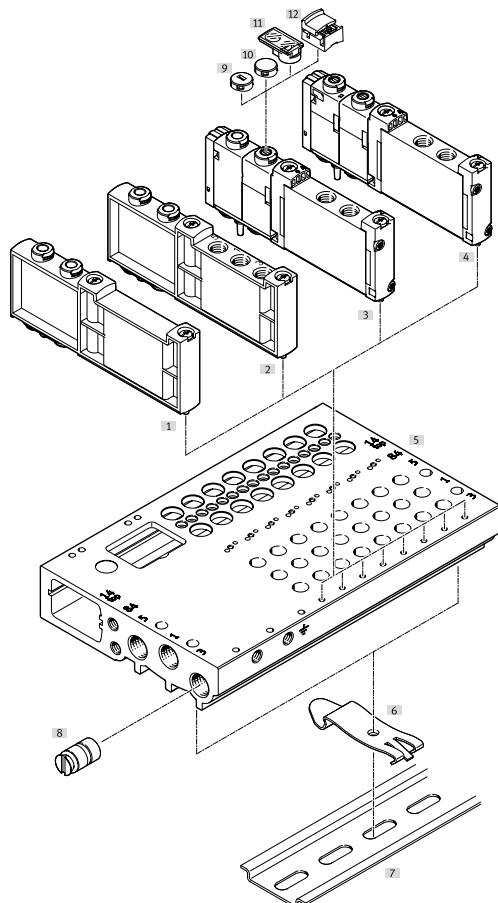

| Valve   | Valve code | Description                             | Size  |      |      |
|---|------------|---|-------|------|------|
|   |            |   | M5/M7 | G1/8 | G1/4 |
| <b>3/2-way valve, pneumatic/mechanical spring</b>                                   |            |   |       |      |      |

| [14] | Blanking plug             | B-...           | For internal/external pilot air                      |
| [15] | Push-in fitting           | QS-...          | For port 2 and 4                                     |

## Peripherals overview example – Sub-base valves

### Valve terminal with multi-pin plug/fieldbus connection and individually electrically actuated valves

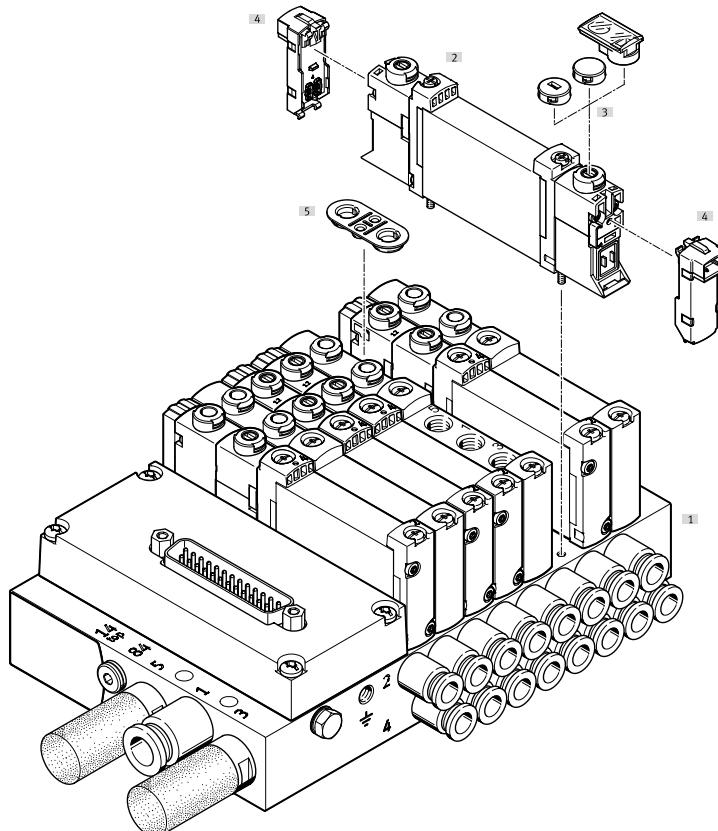

In applications with specific emergency off requirements, it may be necessary to switch one or more valves separately from the valve terminal controller.

Valves VUVG (→ VUVG) with an individual electrical connection are therefore mounted on the valve terminal.

Valves with an individual electrical connection require a special seal when mounted within a valve terminal.

They are therefore ordered/fitted as follows:

- together with the valve terminal using the valve terminal configurator
- individually/subsequently to replace a cover plate in a vacant position

#### Accessories

|     | Type                      | Description | → Page/Internet  |
|-----|---------------------------|-------------|--|
| [1] | Manifold rail             | VABM-L1-10  | For 2 to 10, 12 and 16 valve positions                                     |
| [2] | Solenoid valve            | VUVG        | Sub-base valve   |
| [3] | Cover cap                 | VMPA        | For manual override  |
| [4] | Electrical connection box | VAVE        | For individual connection  |
| [5] | Seal                      | –           | Included in the scope of delivery of the cover plate for a vacant position |

## Datasheet – Semi in-line valves M5/M7

### Function

2x 3/2C, 2x 3/2U, 2x 3/2H

- - Size 10 mm

5/2-way, single solenoid

- - Flow rate

130 ... 330 l/min

5/2-way, double solenoid

- - Voltage

24 V DC

5/3C, 5/3U, 5/3E

Circuit diagrams → page 19

3) E=Mid-position exhausted

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) Combined reset method

6) For information about the area of use, see the declaration of conformity at: [www.festo.com/catalogue/...](http://www.festo.com/catalogue/) → Support/Downloads.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

## Datasheet – Semi in-line valves G1/8

### Function

2x 3/2C, 2x 3/2U, 2x 3/2H

- - Size 14 mm

5/2-way, single solenoid

- - Flow rate

5/2-way, double solenoid

520 ... 630 l/min

5/3C, 5/3U, 5/3E

- - Voltage

24 V DC

Circuit diagrams → page 19

### General technical data

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) For information about the area of use, see the declaration of conformity at: [www.festo.com/catalogue/...](http://www.festo.com/catalogue/) → Support/Downloads.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) Combined reset method

6) For information about the area of use, see the declaration of conformity at: [www.festo.com/catalogue/...](http://www.festo.com/catalogue/) → Support/Downloads.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

## Valve terminal VTUG with multi-pin plug connection and fieldbus interface

### Datasheet – Sub-base valve M5/M7

#### Function

3/2C, 3/2U

2x 3/2C, 2x 3/2U, 2x 3/2H

5/2-way, single solenoid

5/2-way, double solenoid

5/3C, 5/3U, 5/3E

- - Size 10 mm

- - Flow rate  
130 ... 300 l/min

- - Voltage  
24 V DC

Circuit diagrams → page 19

|   | Mid-position exhausted, mechanical spring return   | <b>8141522</b>   | VUVG-B10-P53E-ZT-F-1T1L-F1A |                              |  |

## Datasheet – Sub-base valve G1/8

### Function

3/2C, 3/2U

2x 3/2C, 2x 3/2U, 2x 3/2H

5/2-way, single solenoid

5/2-way, double solenoid

5/3C, 5/3U, 5/3E

- - Size 14 mm

- - Flow rate  
350 ... 560 l/min

- - Voltage  
24 V DC

Circuit diagrams → page 19

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) For information about the area of use, see the declaration of conformity at: [www.festo.com/catalogue/...](http://www.festo.com/catalogue/) → Support/Downloads.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

6)

## Datasheet – Sub-base valve G1/4

### Function

2x 3/2C, 2x 3/2U, 2x 3/2H

- - Size 18 mm

5/2-way, single solenoid

- - Flow rate

800 ... 1000 l/min

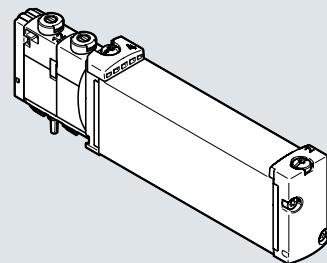

5/2-way, double solenoid

- - Voltage

24 V DC

5/3C, 5/3U, 5/3E

Circuit diagrams → page 19

## Datasheet – Multi-pin plug connection

The following multi-pin plug connections are available for the valve terminal VTUG:

- Sub-D (25-pin)
- Sub-D (44-pin)
- Ribbon cable (26-pin)
- Ribbon cable (50-pin)

### Electrical multi-pin

Each pin on the multi-pin plug can actuate exactly one solenoid coil.

If the maximum configurable number of valve positions is 24, this means that 48 valve functions can be addressed.

The valves can be switched using positive or negative logic (positive switching or negative switching).

Mixed operation is generally not possible; however, an exception is made for the V22 ... V25 variants with 25-pin Sub-D. With these variants, a specific range of valve positions (e.g. Com 16...19) is supplied with common voltage.

This allows these ranges to be switched with positive or negative logic and valve groups to be switched off independently of the other ranges. Mixed operation within a range is not permitted.

#### Note

A double solenoid valve occupies one valve position and two pins on the multi-pin plug. This means that the number of double solenoid valves per manifold rail is limited. (Pin allocation → page 88)

<sup>1)</sup> To IEC 60757

VP Valve position

A grey field means that a double solenoid valve can be used. Only single solenoid valves can be used for fields with a white background.

## Datasheet – Multi-pin plug connection

## Datasheet – I-Port interface/IO-Link

Festo-specific, standardised interface for direct connection to the fieldbus by mounting the bus node CTEU or to an IO-Link master via a cable (in IO-Link mode).

### I-Port interface/IO-Link

Versions:

- I-Port interface for bus nodes (CTEU)
- IO-Link mode for direct connection to a higher-level IO-Link master

The following protocols are supported in connection with the associated CTEU bus node:

- CANopen
- DeviceNet
- PROFIBUS
- CC-Link
- EtherCAT
- AS-Interface
- PROFINET
- EtherNet/IP
- VARAN
- Festo installation system CPI

The electrical supply/transmission of communication data takes place via an M12 plug.

The valve terminal can be equipped with 4 ... 24 (double solenoid) valves.

### General technical data

| Types of communication                                   |                    | IO-Link  |
|--|--------------------|--|

## System overview – IO-Link

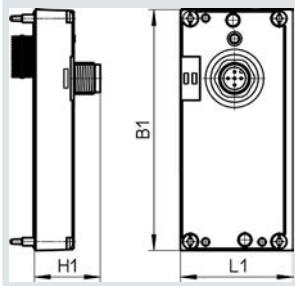

- Communication with the higher-order controller via fieldbus
- Use a bus node CTEU compatible with the fieldbus protocol
- Up to 64 inputs/outputs (solenoid coils), depending on the valve terminal
- No preprocessing

## Datasheet – I-Port interface/IO-Link

## Datasheet – CAPC

### Function

The electrical connection block CAPC enables the decentralised installation of bus nodes CTEU on a valve terminal or input modules with I-Port interface.

### Area of application

- M12 connection technology (two interfaces)
- Enables the installation of valve terminals or other devices over a distance of 20 metres
- Accessory CAFM enables the connection block to be installed on an H-rail

### General technical data

|                           |               |                      |
|---------------------------|---------------|----------------------|
| Type                      | CAPC-F1-E-M12 |                      |
| Dimensions W x L x H      | [mm]          | 50 x 148 x 28        |
| Fieldbus interface        |               | 2x M12 socket, 5-pin |
| Operating voltage range   | [V DC]        | 18 ... 30            |

## Datasheet – Interlock

### Interlock

The interlock function enables the first 16 solenoid coils to be individually supplied externally.

This ensures that these valves can be enabled in a safety-oriented way.

The interlock interface is established via external contacts for a single-pin connection or via safety output terminals for a double-pin connection.

#### General technical data

|  |                                     |   |
|--|-------------------------------------|---|
| Types of communication                       | I-Port/IO-Link                      |   |

## Datasheet – Interlock

### Interlock interface

#### Single-pin interlock interface

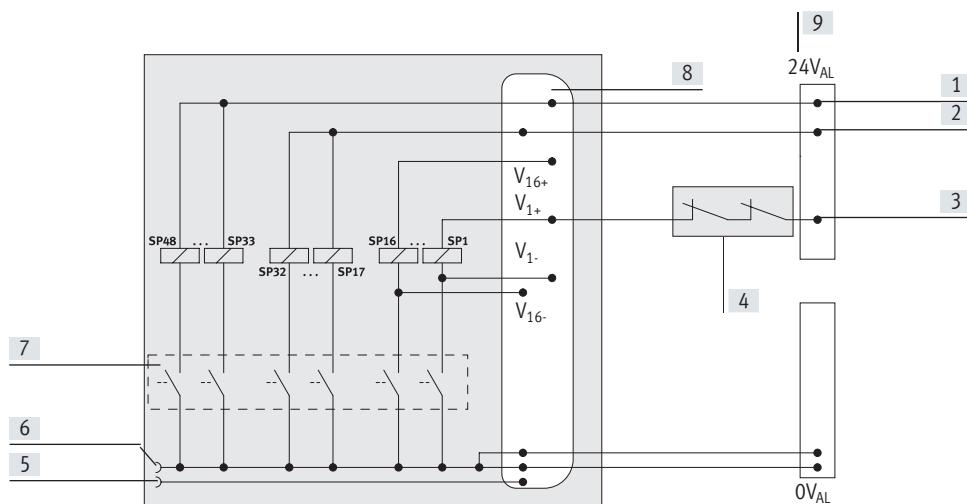

- The interlock interface is established via external positive switching contacts or single-pin switching safety terminals
- 16 solenoid coils can be actuated via the interlock ( $V_{n+}$ )

- Solenoid coils that do not require interlock actuation can be supplied directly with 24 V from pins 1 ... 3
- Application of the respective input voltage is reported via the fieldbus as a process image

#### Double-pin interlock interface

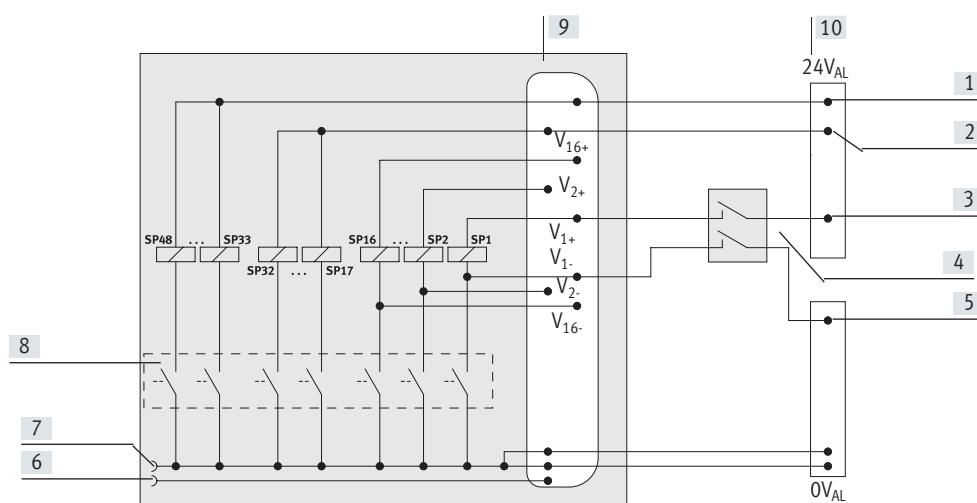

- The interlock interface is established via external positive-negative switching safety terminals
- The solenoid coils of the interlock valves are actuated via the corresponding pins in the sub-D plug (pins 7 ... 38)
- The solenoid coils that do not require interlock actuation can be supplied directly with 24 V (e.g. from pins 1 ... 3)
- Any difference in potential between  $V_{n-}$  and 0 VVAL/OUT must be below 5 V

#### Sample circuit diagram for a single-pin interlock interface

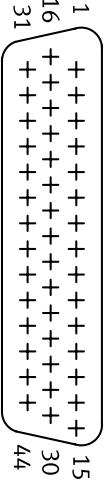

- [1] Power supply  $V_+$ ; solenoid coil 33 ... 48 (no interlock)
- [2] Power supply  $V_+$ ; solenoid coil 17 ... 32 (no interlock)
- [3] Actuation  $V_{n+}$  (via interlock)
- [4] Interlock contacts of the output terminal
- [5] I-Port connection pin 2, 24 VVAL/OUT (PL), load voltage supply
