### Function

-  - Flow rate  
1600 ... 3800 l/min
-  - Temperature range  
-10 ... +60 °C
-  - Operating pressure  
1 ... 16 bar

The pressure regulator is suitable for manifold assemblies with through air supply, for configuring a regulator manifold with separate, independent pressure regulation ranges. Pressure output is at the front or rear.

- Good regulation characteristics with minimal hysteresis and input pressure compensation
- Manifold assembly with through air supply
- For attaching a regulator manifold with independent pressure ranges
- Two pressure regulation ranges:  
0.5... 7 bar and 0.5 ... 12 bar
- Settings secured via latch on rotary knob and push-in anti-tamper lock

## Standard flow rate $q_n$ as a function of output pressure $p_2$

Operating pressure  $p_1 = 10$  bar

**Note**  
Minor leakage at the output is intended by design. It improves the control behaviour of the regulator which is not compensated for primary pressure.  
In rare cases, however, the leakage can be up to 500 l/h.
